

ProtoADME

ProtoADME is a computational (*in silico*) tool focused on the prediction of endpoints related with the ADME (Absorption, Distribution, Metabolism and Excretion) of chemical substances.

Endpoint

Toxicokinetic: P-gp substrate

P-glycoprotein (P-gp, also known as MDR1 or ABCB1) is a member of the superfamily of ABC transporters, which transport various molecules across cellular membranes, and is highly expressed in the intestinal epithelium. P-gp is an energy-dependent efflux pump driven by ATP hydrolysis. Efflux by P-gp can be a major limitation for the oral delivery of a number of drugs.

Metrics

Experimental values	QSAR predictions		
	Non-substrate	Substrate	
Non-substrate	261	35	
Substrate	53	261	

Training set

Validation	set

Experimental values	QSAR predictions		
	Non-substrate	Substrate	
Non-substrate	72	31	
Substrate	30	74	

Parameters	Training	Validation
Accuracy	0.86	0.71
Sensitivity / recall	0.83	0.71
Specificity	0.88	0.70
Precision	0.88	0.70
Negative predictive value	0.83	0.71
F-score	0.86	0.71
Matthews Correlation Coefficient	0.71	0.41
Critical Success Index	0.75	0.55
Area under the ROC	0.86	0.71

ProtoADME is part of

ProtoPRED platform allows the easy, fast and user-friendly prediction of different properties of chemical compounds, using proprietary (Q)SAR models.
