

ProtoECO

ProtoECO is a computational (*in silico*) tool focused on the prediction of endpoints related with ecotoxicity and the environmental effects chemical substances. This includes properties related to the distribution and degradation of substances in the environment as well as their toxic effects in the biota.

ProtoECO mainly includes, but is not limited to, endpoints used by REACH, a European Union regulation, adopted to improve the protection of human health and the environment from the risks that can be posed by chemicals, while enhancing the competitiveness of the EU chemicals industry.

Endpoint

Environmental fate parameters: Persistence: Biodegradation. Biodegradation time frame (primary, ultimate degradation).

This model refers to the half-life ($T_{1/2}$) in soil which is the time interval that corresponds to a concentration decrease by a factor 2.

Metrics

Training set

Validation set

Parameters	Training	Validation
R ² score	0.97	0.77
Mean absolute error (MAE)	0.08	0.23
Mean squared error (MSE)	0.02	0.16
Median absolute error	0.04	0.13
Explained variance	0.97	0.77

ProtoECO is part of

ProtoPRED platform allows the easy, fast and user-friendly prediction of different properties of chemical compounds, by proprietary (Q)SAR models.
